PNEUMATIC MANUAL TOURNIQUET - SINGLE USE - DDM

Ref. GMCU05

Dedicated to emergency situations, the single-use DDM manual pneumatic tourniquet is completely stand-alone, making it a true French innovation!

Description

Designed to accompany the patient from the accident site to the emergency room, DDM's single-use pneumatic tourniquet is accessible and easy to use, thanks to its safety valve.

This single-use pneumatic tourniquet is self-sufficient in its composition: bulb, cuff and valve. The injured patient leaves and keeps the tourniquet on until surgery.

With a wide cuff and foam reinforcement inside, pressure is distributed more widely, avoiding skin lesions and intense pain.

Without a manometer, thanks to a mechanical valve, this manual pneumatic tourniquet avoids overpressure, so pressure does not exceed 300mmHg.

This tourniquet also features a label directly on the cuff for recording patient data, such as patient name, date and time of tourniquet application.

- Available in :

Adult 23-33cm (GMBU04)

Child (GMBU02)

XL Adult 38-50cm (GMCU05)
